General Information

Background Sarcoplasmic and endoplasmic reticulum Ca²⁺ ATPases (SERCA) are

members of a highly conserved family of Ca²+ pumps. SERCA pumps transport Ca²+ from the cytosol to the sarcoplasmic and endoplasmic reticulum lumen against a large concentration gradient. ATP2A1 (SERCA1) is a fast-twitch, skeletal muscle sarcoplasmic reticulum Ca²+ ATPase. Mutations in this gene cause some autosomal recessive forms of Brody disease, characterized by increasing impairment of muscular relaxation during exercise. Alternative splicing results in two transcript variants

encoding different isoforms.

Immunogen Polyclonal antibody is produced by immunizing animals with a synthetic

peptide of ATP2A1/SERCA1.

Purification Polyclonal antibody was purified by immunogen affinity chromatography.
