General Information

Background Frizzled 8 is a member of the frizzled gene family. Members of this family encode 7-transmembrane domain proteins that are receptors for the Wingless type MMTV integration site family of signaling proteins. Most frizzled receptors are coupled to the beta-catenin canonical signaling pathway.

Immunogen Polyclonal antibody is produced by immunizing animals with a synthetic peptide of Frizzled 10.

Purification Polyclonal antibody was purified by Protein A affinity chromatography.
