General Information

Background Calcineurin, also known as protein phosphatase 2B (PP2B), is a calmodulin-dependent, calcium-activated, serine/threonine protein phosphatase composed of a catalytic subunit (calcineurin A) and a tightly bound regulatory subunit (calcineurin B). Calcineurin B, like calmodulin, contains four EF-hand, calcium-binding motifs. An additional protein phosphatase catalytic subunit, PPX (also known as PP4), is a putative member of a novel PP family. The PP2B family comprises subfamily members PP2B-A α , PP2B-A β and PP2B-A γ . Two additional regulatory subunits been identified, designated PP2B-B1 and PP2B-B2.

Immunogen Polyclonal antibody is produced by immunizing animals with a synthetic peptide of Calcineurin β /PP2B-B1.

Purification Polyclonal antibody was purified by Protein A affinity chromatography.
