General Information

Background

COUP (chicken ovalbumin upstream promoter) transcription factors have been cloned in several species and identified as orphan members of the steroid/thyroid hormone receptor superfamily. COUP-TFI (also designated COUP or EAR-3) and ARP-1 (also designated COUP-TFII) exhibit highly regulated and overlapping expression in most tissues. COUP-TFs are highly expressed in the developing and central nervous system, suggesting that these factors may be important in neural development and differentiation.

Immunogen

Polyclonal antibody is produced by immunizing animals with a synthetic peptide of COUP Tf1.

Purification

Polyclonal antibody was purified by immunogen affinity chromatography.
