## General Information

**Background** BTB and CNC homology 1, basic leucine zipper transcription factor 1(BACH1) is a heme-regulated transcriptional regulator that acts as repressor or activator and a member of the AP-1 superfamily. MafK belongs to the small Maf family that can function as transcriptional activators or repressors depending on the proteins with which they form heterodimers. BACH1 has crucial roles in both stress responses and transformation by H-RasV12.

**Immunogen** Polyclonal antibody is produced by immunizing animals with a synthetic peptide of BACH1.

**Purification** Polyclonal antibody was purified by Protein A affinity chromatography.
