General Information

Background	This gene encodes a cysteine-rich acidic matrix-associated protein. The encoded protein is required for the collagen in bone to become calcified but is also involved in extracellular matrix synthesis and promotion of changes to cell shape. The gene product has been associated with tumor suppression but has also been correlated with metastasis based on changes to cell shape which can promote tumor cell invasion.
Immunogen	Polyclonal antibody is produced by immunizing animals with a synthetic peptide of SPARC.
Purification	Polyclonal antibody was purified by Protein A affinity chromatography.
