General Information

Background	Tyrosine-protein kinase Blk(BLK) is typically involved in cell proliferation and differentiation. The protein has a role in B-cell receptor signaling and B-cell development. BLK also stimulates INS synthesis and secretion in response to glucose and enhances the expression of several pancreatic beta-cell transcription factors.
Immunogen	Polyclonal antibody is produced by immunizing animals with a synthetic peptide of BLK.
Purification	Polyclonal antibody was purified by Protein A affinity chromatography.
