General Information

Background	Matrix metalloproteinase-1 (MMP1) also known as interstitial collagenase and fibroblast collagenase is an enzyme that in humans is encoded by the MMP1 gene. MMP1 was the first vertebrate collagenase both purified to homogeneity as a protein, and cloned as a cDNA. MMP1 has an archetypal structure consisting of a pre-domain, a pro-domain, a catalytic domain, a linker region and a hemopexin-like domain. Two main nomenclatures for the primary structure are currently in use, the original one from which the first amino-acid starts with the signalling peptide and a second one where the first amino-acid starts counting from the prodomain (proenzyme nomenclature).
Immunogen	Polyclonal antibody is produced by immunizing animals with a synthetic peptide of MMP1.
Purification	Polyclonal antibody was purified by immunogen affinity chromatography.
