General Information

Background	Cardiac Troponin T is the tropomyosin-binding subunit of the troponin complex, which is located on the thin filament of striated muscles and regulates muscle contraction in response to alterations in intracellular calcium ion concentration. Mutations in this gene have been associated with familial hypertrophic cardiomyopathy as well as with dilated cardiomyopathy.
Immunogen	Polyclonal antibody is produced by immunizing animals with a synthetic peptide of Cardiac Troponin T.
Purification	Polyclonal antibody was purified by immunogen affinity chromatography.
