General Information

Background	NGFRAP1 may be a signaling adapter molecule for NGF induced NGFR/P75NTR mediated cell apoptosis. Plays a role in zinc triggered neuronal death. In the absence of reducing stress, as a pseudo substrate of CRL2 (FEM1B) complex, it is associated with FEM1B through zinc, thereby preventing the association between FEM1B and its substrate.
Immunogen	Polyclonal antibody is produced by immunizing animals with a synthetic peptide of NGFRAP1/BEX3.
Purification	Polyclonal antibody was purified by Protein A affinity chromatography.
