General Information

Background	NGF is a member of the NGF-beta family and encodes a secreted protein which homodimerizes and is incorporated into a larger complex. Nerve growth factor is important for the development and maintenance of the sympathetic and sensory nervous systems. Extracellular ligand for the NTRK1 and NGFR receptors, activates cellular signaling cascades through those receptor tyrosine kinase to regulate neuronal proliferation, differentiation and survival.
Immunogen	Polyclonal antibody is produced by immunizing animals with a synthetic peptide of NGF.
Purification	Polyclonal antibody was purified by immunogen affinity chromatography.
