General Information

Background	The Src family of protein tyrosine kinases, which includes Src, Lyn, Fyn, Yes, Lck, Blk, and Hck, are important in the regulation of growth and differentiation of eukaryotic cells. It is a protein tyrosine kinase known to regulate cellular adhesion. Src activity is regulated by tyrosine phosphorylation at two sites, but with opposing effects. While phosphorylation at Tyr416 in the activation loop of the kinase domain upregulates enzyme activity, phosphorylation at Tyr527 in the carboxy-terminal tail by Csk renders the enzyme less active. Several cancers including colon and breast cancer have been associated with an increase of Src activity.
Immunogen	Polyclonal antibody is produced by immunizing animals with a synthetic peptide of Src.
Purification	Polyclonal antibody was purified by immunogen affinity chromatography.
