General Information

Background

HDAC3 is a nuclear and cytoplasmic protein that deacetylates both histone (H2A, H3, H4) and non-histone substrates (RelA, SRY, p53, MEF2, PCAF and p300/CBP). It has histone deacetylase activity and represses transcription when tethered to a promoter. It may participate in the regulation of transcription through its binding with the zinc-finger transcription factor YY1. HDAC3 can also down-regulate p53 function and thus modulate cell growth and apoptosis.

Immunogen

Polyclonal antibody is produced by immunizing animals with a synthetic peptide of HDAC3.

Purification

Polyclonal antibody was purified by immunogen affinity chromatography.
