General Information

Background	Apolipoprotein L family member may play a role in lipid exchange and transport throughout the body, as well as in reverse cholesterol transport from peripheral cells to the liver. Human apolipo-protein L1 (APOL1) is a minor component of plasma high density lipoprotein (HDL) particles, acting as an interacting protein of apolipoprotein A1 (ApoA1). It is involved in the formation of most cholesteryl esters in plasma and also promotes efflux of cholesterol from cells.
Immunogen	Polyclonal antibody is produced by immunizing animals with a synthetic peptide of Apolipoprotein L1.
Purification	Polyclonal antibody was purified by immunogen affinity chromatography.
